FUNCTIONAL REQUIREMENT SPECIFICATION

1. **Scope.** To implement plagiarism detection and AI content detection module for AFTPS which conducts vivid courses.

2. **Current Scenario.** Currently as a core component and requirement of Air Force Test Pilot School the student officers are required to submit debrief reports in FTER format on completion of every training phase. These reports are now assessed by instructors manually based on technical merits.

3. **Use Case.** There exists different kind of users while using the application for phase one of the project we have **Administrator** and **Instructor.**

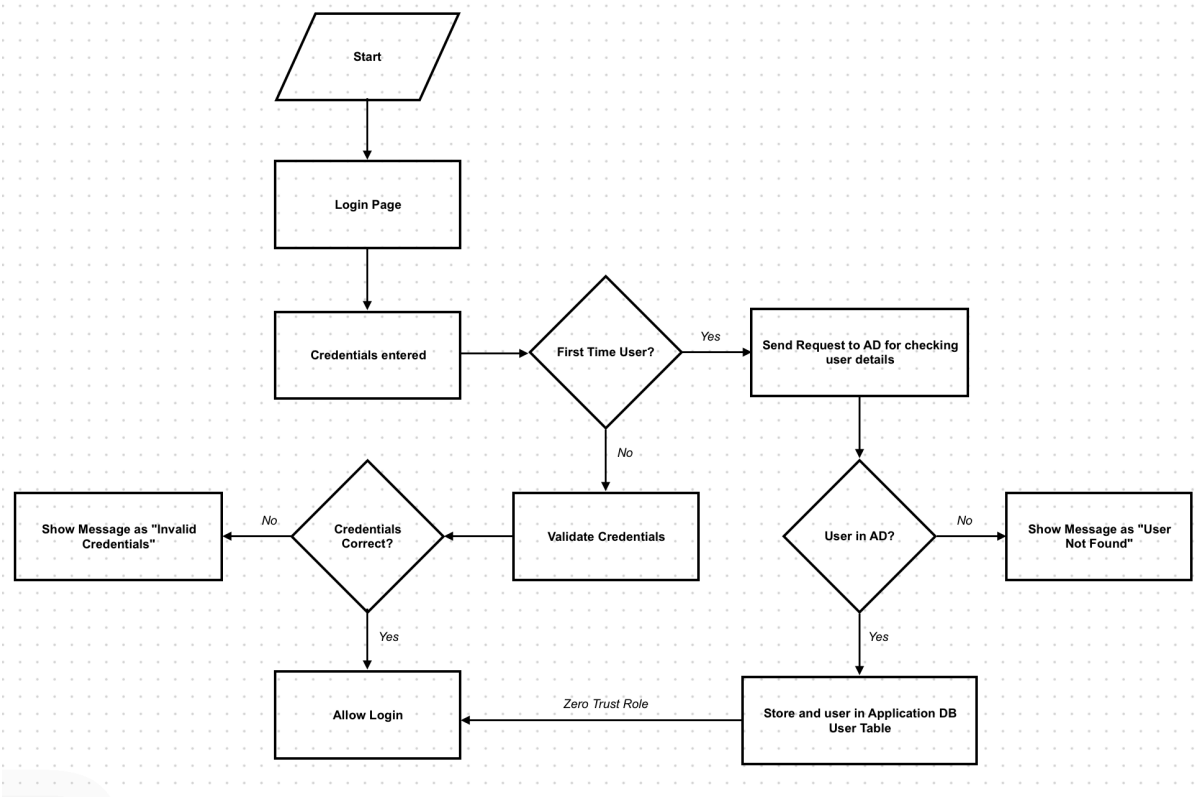

3.1. **Administrator.** Administrator can have entire control over database such that the privileges for saving the documents, deleting documents or updating documents. Also, application setting configurations would be the responsibility of Administrator.

3.2. **Instructor.** Instructor would be the one who will be working on uploading the reports and checking the plagiarism and AI content score and generate a certificate for that. Also, can compare 2 documents side by side so that can be checked what content exactly is copied.

4. **Expected Scenario.** Following defines the application flow and also what the user will experience while using the application.

4.1. **User Landing on Login Page.** User can land on login page via searching the link on an AFNET Browser *https:// www.plagcheckaftps.iaf.in* this link would be only accessible to the user trying to login or search at the AFTPS premises as the setup is On Premise.

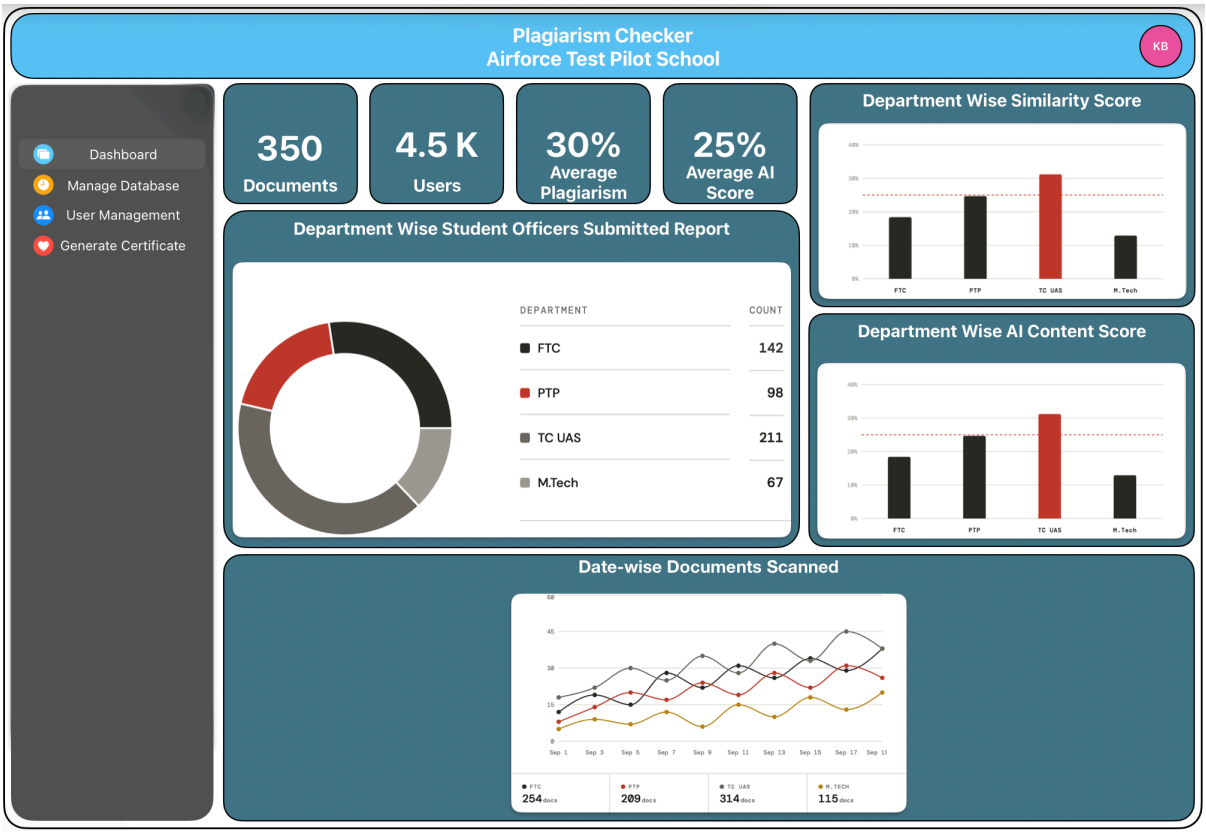

4.2. **User Login & Registration.** Following is the flowchart depicting the login flow for User also if user is not registered or not yet logged how to register it.

4.3. **Privileges and User Flow.**

4.3.1. **For Administrator (Dashboard).**

4.3.1.1. **Dashboard.** The Dashboard will be the landing screen for Administrator user which will have the cards for No. Of documents, users, average plagiarism and AI content score with other related graphs and charts for the quick insights for administrator

4.3.1.2. **Manage Database.**

This tab gives administrator the DB management privilege by sub tabs and tasks like Approving or Rejecting Pending Requests, Deleting Docs.

4.3.1.3. **User Management.**

This tab helps administrator to perform user management operations like Activating or Deactivating user along with assigning the roles and privileges to specific user.

4.3.1.4. **Generate Certificate.**

This functionality will work similar to Instructor user's Generate Certificate.

4.3.2. For Instructor.

4.3.2.1. Generate Certificate.

For uploading the documents the instructor would be given an option.

Instructor lands on the following page after logging in to application.

User clicks on the upload icon and uploads the document.

User clicks scan document button.

User can check the Plagiarism and AI Content Score at top bar along with the highlighted text which is plagiarised or AI Content.

User will have 3 options further *Request to save in DB, Compare Content, Generate Certificate.*

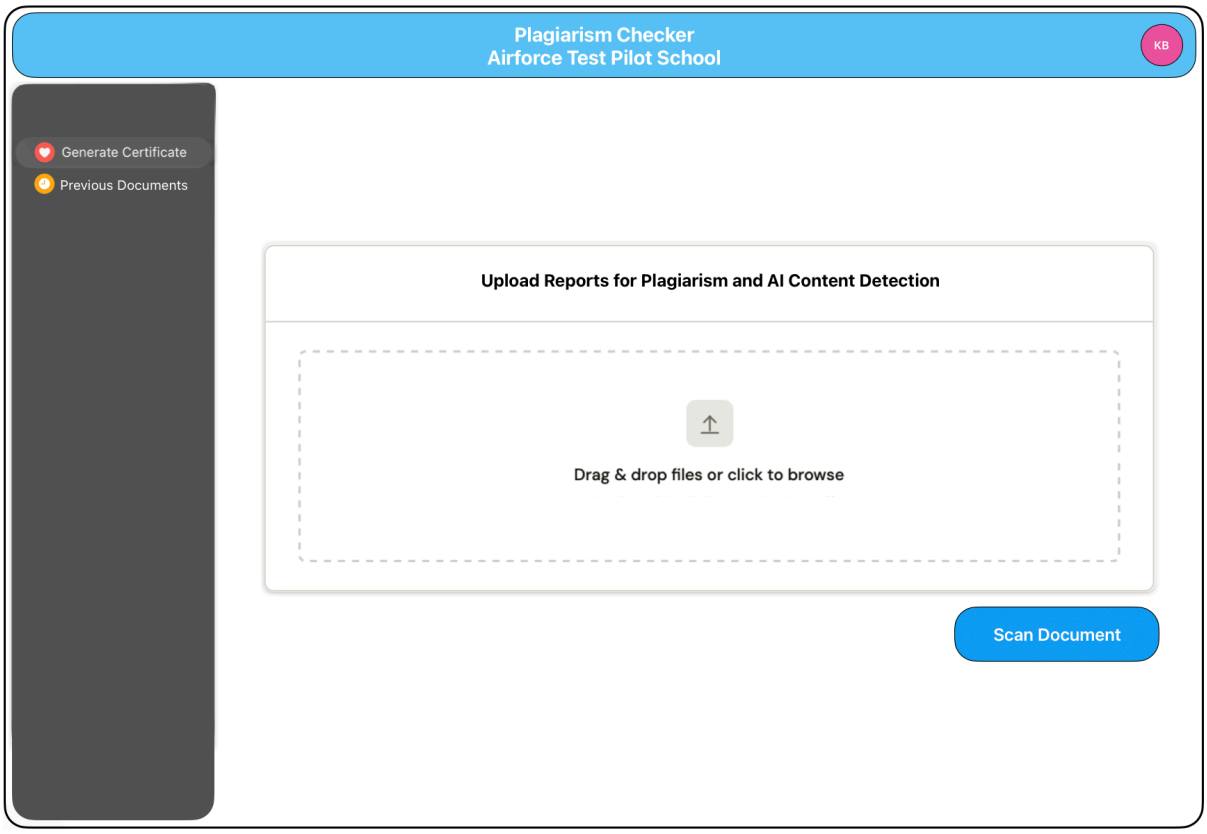

After clicking "*Request to save in DB" t*he document would be sent to Admin under Pending Documents for approval of storing in DB.

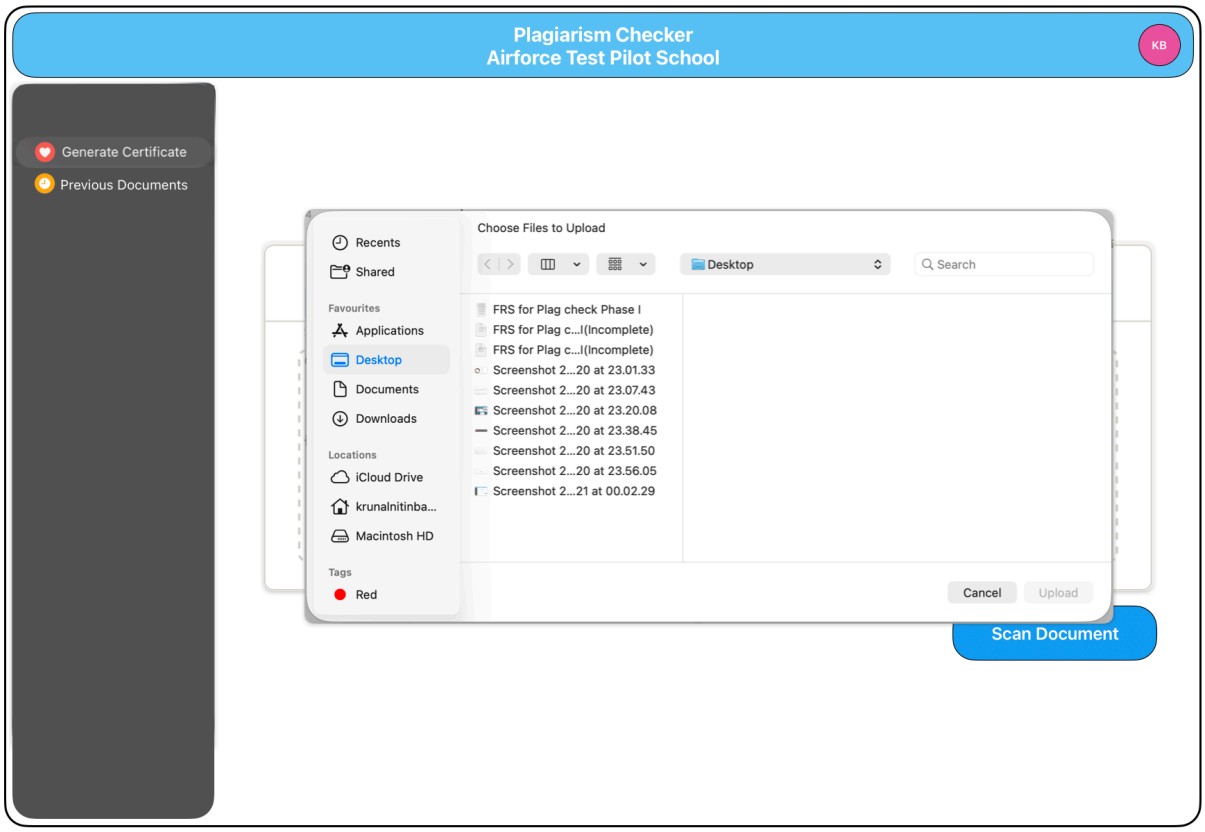

After clicking "*Compare Content"* a side editor pane would open along with the similar content on it. When it is clicked the links, pdfs or report links would be flashed on the editor.

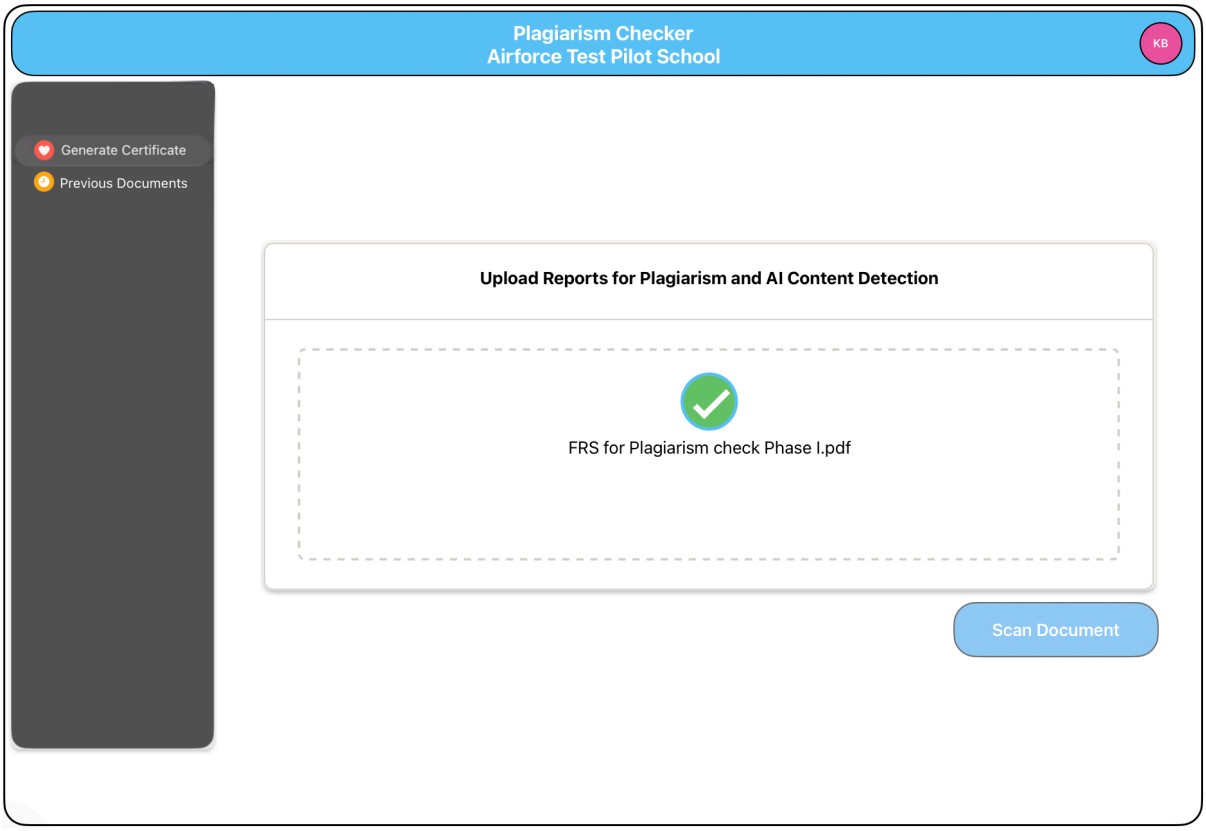

After Clicking "*Generate Certificate*" a user detail along with project detail pane would open and after clicking submit a certificate along with Student Officer name and other details would be generated showing the Plagiarism and AI Content score

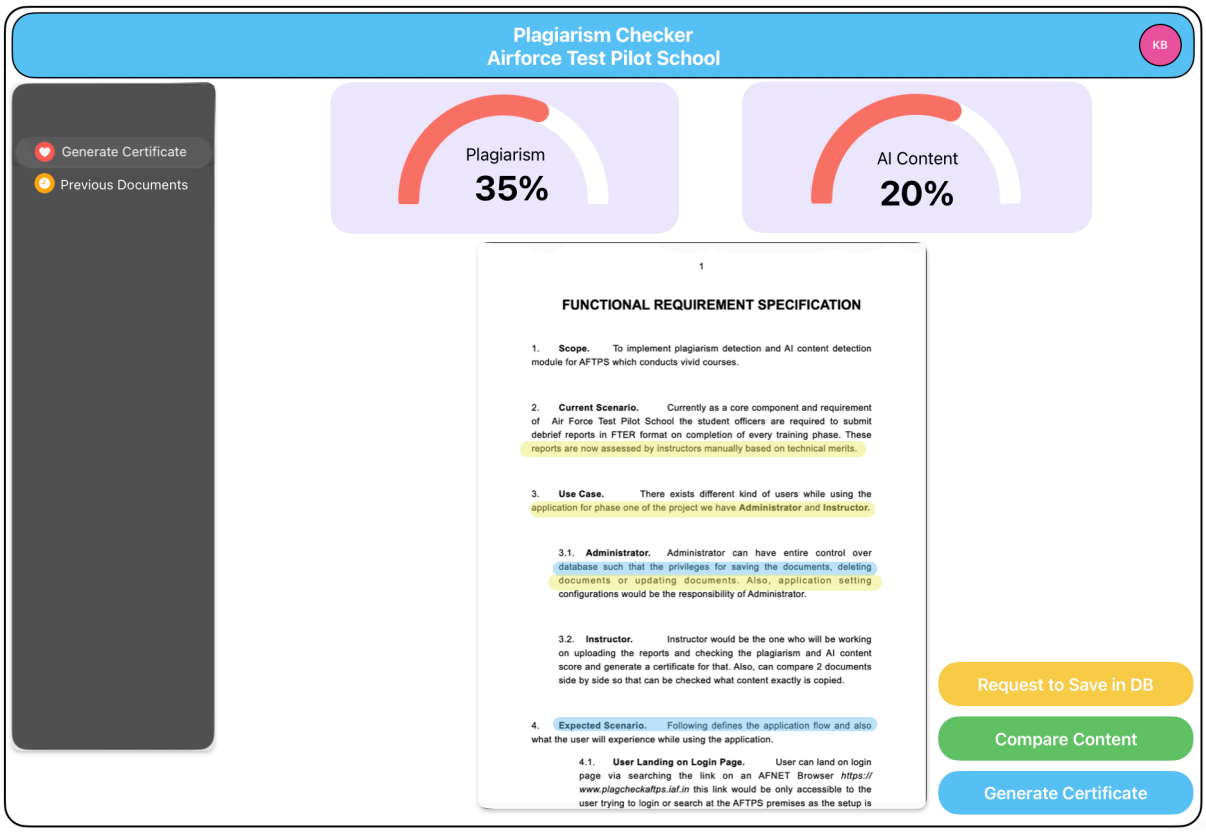

4.3.2.2. **Previous Documents.**

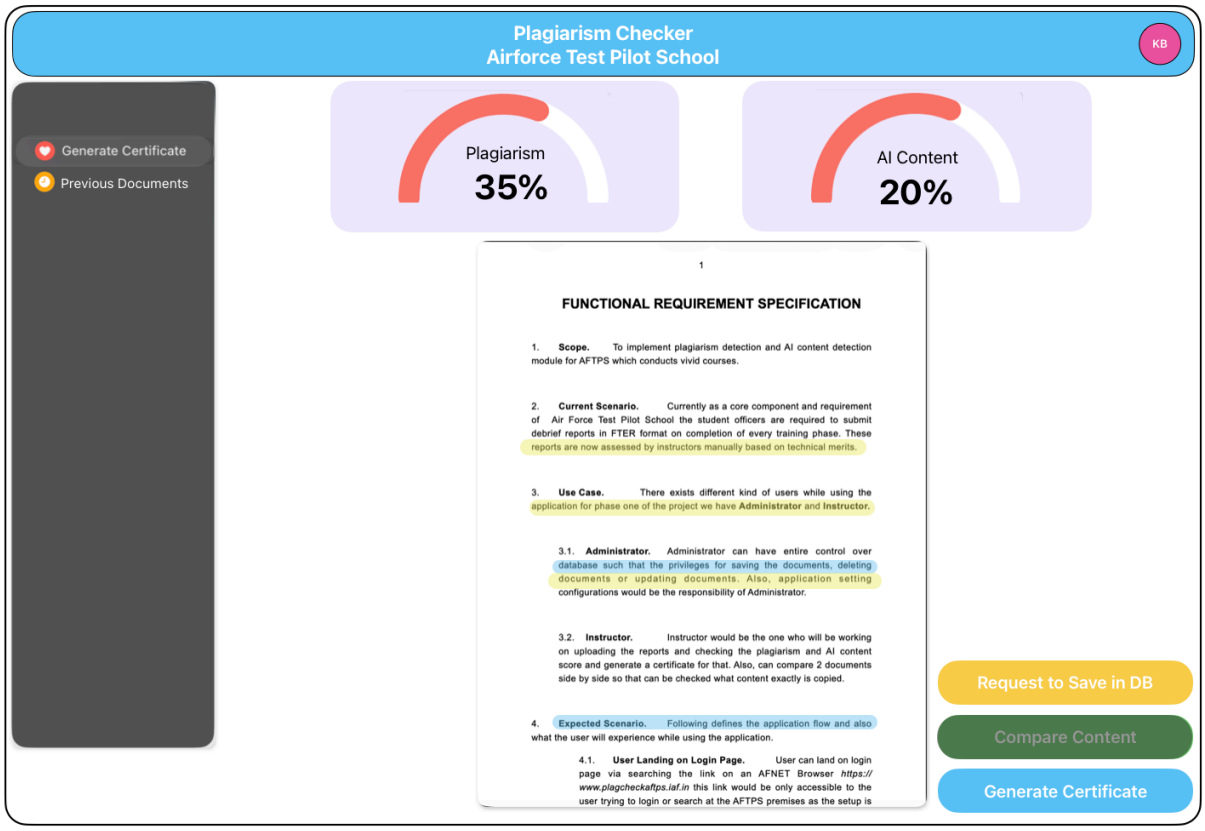

There would be another option in side bar where user can check the previously scanned documents retained for redundancy which can be further accessed if required.
